

FounderOS Test Dataset

Demo Scenario A — SaaS Retention Crisis

Company: FitSync AI

Industry: SaaS / Fitness Tech

Stage: Seed Stage

Business Overview

FitSync AI is an AI-powered fitness and meal-planning platform focused on gym users in Pakistan.

The company recently experienced a major increase in customer churn after releasing a redesigned onboarding system.

Customer feedback shows:

- confusing onboarding
- weak personalization
- delayed support responses
- unclear pricing tiers

Current KPI Snapshot

MRR: \$12,000

Retention: 41%

Churn: 28%

CAC: \$48

Active Users: 5,200

Support Response Time: 18 hours

Industry Benchmarks

Average Retention: 60%

Average Churn: 12%

Average CAC: \$35

Average Support Response: 4 hours

Customer Feedback Summary

- Users abandon signup during onboarding
- Referral feature is difficult to locate
- Premium pricing benefits are unclear
- Competitors offer localized discounts
- Support responses are too slow

Competitive Landscape

Main competitors:

- MyFitnessPal
- HealthifyMe
- Local Pakistani fitness startups

Competitors recently launched:

- Urdu onboarding
- lower-cost annual plans
- faster support

AI System Objective

FounderOS should:

1. Detect root causes of churn
2. Analyze onboarding friction
3. Generate a 3–5 step action plan
4. Simulate KPI improvements
5. Produce BEFORE vs AFTER state projections
6. Generate investor risk analysis

Expected AI Simulation Targets

Retention: 41% → 57%

Churn: 28% → 18%

MRR: \$12,000 → \$15,500

Support Response Time: 18h → 6h

Expected Actions

- Launch retention campaign
- Redesign onboarding flow
- Improve customer support
- Introduce regional pricing
- Notify investors about recovery strategy
